1. Economically significant enterprises and geographic units belonging to these enterprises; economically significant enterprises are mostly those with GST turnover greater than \$30,000 per year.

2. Employee count is a headcount of all salary and wage earners for the February reference month. Counts of employees for each business have a small amount of 'noise' added or subtracted before they are combined into tables to protect individual businesses' data by at least 10%. For most cells, the individual businesses' noise tends to cancel out so the cell-level noise is relatively small. Where the cells correspond to just a few businesses, there will be relatively higher levels of noise to protect the corresponding businesses' data.
