

# COVID-19 vaccine:

## Estimated volumes and timing of vaccine rollout

(New Zealand Government, 2021e)

This illustration shows planned DHB vaccine dose delivery to 30 June 2021. It then shows the projected increased vaccine delivery required to offer two doses of the vaccine to everyone in New Zealand aged 16 or over before the end of the year. Please note, it does not assume a specific acceptance level.

The model is a high level estimate prepared by the Ministry of Health, and will be subject to regular revision as the assumptions that inform it are updated.

The DHB plan figures are based on plans published on 14 April 2021 for the period from 5 April to 30 June 2021.

The model takes into account an expected step increase in volumes between July and September, with an anticipated increase in delivery of vaccinations related to the eligible population and anticipated stock levels.
