| Appendix 4: Crown expenditure                  | 56 |

# 1.0 Introduction

## 1.1 Purpose

While this can be read as a standalone paper, it is intended to support and complement the Institute's YouTube videos on the subject. The research is designed to show how New Zealand's exports, imports, Crown expenditure and receipts have changed since 1899. Understanding the past helps us identify trends over time and prepare better for the future.

## 1.2 Background

The information in this paper aims to contribute to an evidence base that the Institute will use to shape future projects and encourage uncomfortable conversations about New Zealand's public policy – past, present and future.

## 2.0 Methodology

### 2.1 Introduction

The strategies the Government has put in place, or agreed to, in order to manage the impacts of climate change require constant review and assessment so as to ensure New Zealand develops the most cost-effective, durable strategies to both mitigate and adapt to climate change.

### 2.2 Method

The research process for this working paper is outlined below.

#### **Step 1: Research**

The research team gathered data for each graph. The sources were:

- *The New Zealand Official Year-Books*
- *NZ.Stat*
- *Financial Statements of the Government of New Zealand for the year ended 30 June*
- *Statistics New Zealand overseas merchandise trade.*

(All references are attached below in **data sources**.)

#### **Step 2: Check and categorise data**

The research team collated the annual data for each graph in an Excel spreadsheet:

#### **Exports and imports by country:**

The Institute collected 1896–2010 data on all countries that New Zealand reported it had exported to and imported from. From 2019 onwards, the Institute focused on imports and exports with the following countries:

- China, People's Republic of
- Australia
- United States of America
- United Kingdom
- Germany
- Japan
- Korea, Republic of
- Hong Kong (Special Administrative Region)
- India
- Singapore
- Taiwan
- Malaysia
- Thailand
- Canada
- Indonesia
- Philippines.

All other countries were categorised as 'Other'.

**Exports and imports by commodity:**

The Standard International Trade Classification (SITC) is an output classification developed by the United Nations. The Institute collected data based on the SITC in the following categories:

- Food and live animals
- Beverages and tobacco
- Crude materials (inedible, except fuels)
- Mineral fuels (lubricants and related materials)(5)
- Animal and vegetable oils (fats and waxes)
- Chemicals and related products
- Manufactured goods (classified chiefly by material)
- Machinery and transport equipment
- Miscellaneous manufactured articles
- Other.

**Crown receipts:**

The Institute collected data on receipts in regards to the following areas:

- Direct Taxation
- Indirect Taxation
- Levies & Fines
- Investment Income
- Sales of Goods & Services
- Others.

**Crown expenditure:**

The Institute collected data on expenditure in regards to the following areas:

- Social security, welfare, pension & GSF
- Health
- Education
- Core government services
- Law & Order
- Defence
- Transport & Communications
- Economic and industrial services
- Heritage, culture & recreation
- Housing and community development
- Finance costs
- Other.

This data was then independently reviewed by another member of the research team to check for accuracy.

**Step 3: Design**

The design team turned each year into a pie chart. These were used to create animations.

## 2.3 Limitations

Our research presents a number of limitations and assumptions:

### 1. Changes in key terms

It is likely definitions of key terms have changed over the years. The Institute has not checked that terms are used consistently over time. Instead, we have relied on the Stats NZ International Trade Statistics glossary.<sup>1</sup>

### 2. Overall size of data not measured or comparable between years

The pie charts are intended solely to compare the relative proportions of categories within each year. Any annual changes in the overall size of the data are not depicted or analysed in our infographics.

### 3. Multiple sources

- For years 1896–1975, data from *The New Zealand Official Year-Books* is used for exports and imports (countries), exports and imports (commodities), and Crown expenditure and receipts.
- For years 2000–2010, the data source changed to *NZ.Stat* for exports and imports (countries) and exports and imports (commodities).
- For years 2000–2024, the data source changed to the *Financial Statements of the Government of New Zealand for the year ended 30 June* for Crown expenditure and receipts.
- For years 2019–2024, the data source changed to *Statistics New Zealand overseas merchandise trade* for exports and imports (countries) and exports and imports (commodities).

There are potential inconsistencies when using different sources.

### 4. Missing data references (for some data in years 2000 and 2010)

The Institute submitted an OIA in April 2025 to find sources of some missing data in 2000 and 2010. When we were reviewing our references, we encountered an issue relating to this data, which was originally sourced from *NZ.Stat*. It appears not to have been migrated to ‘Aotearoa Data Explorer’ following the closure of the *NZ.Stat* website in September 2024. While we have the data in our system and have confidence in it, we have requested access to the source that was previously used for our records.

### 5. Reliant on past research

This is an update on an existing piece of Institute work. The Excel data was originally collated by BDO and was updated by the McGuinness Institute research team in 2025. In 2025, the Institute updated the graphs from 2020–2024. Therefore, all data for the years 2020, 2022 and 2024 was personally collected by the Institute. Because of this, there may be some discrepancies in the past research and differences in how the two groups calculated the data.

# 3.0 Results

Applying the method above resulted in the data and pie charts which can be found in the Tables and Figures in the appendices. The final animations can be found on the [Institute's YouTube](#). These allow us to reflect on the past and plan for the future

The below commentary can be read alongside each animation.

## 3.1 Exports

### NZ exports by country (June 1896–2024)

This animation shows how New Zealand's exports by country have changed over time. You can observe trends in New Zealand's exports by watching certain colours and how they change each year.

Watch the bright pink (United Kingdom) and you will see how significantly New Zealand's export dependence on the United Kingdom has decreased over time.

Watch the yellow (People's Republic of China), light pink (United States of America) and dark blue (Australia) and you will see the extent to which New Zealand now has three major export markets. New Zealand goods exports to China have quadrupled since the free trade agreement was signed in 2008.<sup>2</sup>

The level of exposure New Zealand might face from tariffs or supply chain risks will depend on the nature of the products and services being imported or exported by country. For example, dairy products are generally exported to China and fuel is largely imported from the Republic of Korea.

Importantly, travel is not included in commodities but is included in exports and imports by country. Stats NZ defines 'travel services' as including 'the value of goods and services purchased by a person when they are visiting another country. Travel expenditure is the largest component of both services exports and imports.'<sup>3</sup> In New Zealand in 2024, MBIE reports international visitors spent \$12.2 billion, including \$3.2 billion in the December quarter alone. If adjusted for inflation, this is 86% of New Zealand's 2019 levels.<sup>4</sup>

You can also view the Institute's animation on NZ exports by commodities for more detail on what New Zealand exports and how that has changed over time.

Figure 1: NZ exports by country (June 1896 and 2024)

[NZ exports by commodities \(June 1898–2024\)](#)

This animation shows how New Zealand’s exports by commodities have changed over time. You can observe trends in New Zealand’s exports by watching certain colours and how they change each year.

Watch the red (Manufactured goods (classified chiefly by material)) and see how it dramatically fluctuates over time. Interestingly, it decreased in 2020 (due to COVID-19), so it is worth considering how New Zealand can get it back to pre-COVID-19 times.

Watch the dark blue (Food and live animals) and you will see the extent to which the export economy has consistently depended on agriculture. This significant reliance on one sector is worth consideration when planning for how New Zealand can mitigate risk and operate on the global economy in the future.

You can also view the Institute’s animation on NZ exports by country for more detail on where New Zealand exports to and how that has changed over time.

Figure 2: NZ exports by commodities (June 1898 and 2024)

## An in-depth review of exports for the year 2024

These three graphs analyse the makeup of New Zealand's top 25 exports, by commodity/service and destination, for the year ended December 2024.

This data exposes our vulnerability to shocks and tariffs, as well as our reliance on exporting certain types of goods to a few trading partners.

### Our observations

Figure 3: Top NZ 25 exports, by commodity/service and destination, for the year ended December 2024 - by commodity and by service

Source: Statistics New Zealand (2024)<sup>5</sup>

It is surprising to see such a significant portion of New Zealand's top exports were services. They made up NZ\$14,651 million (37%), in comparison to commodities, which made up NZ\$24,444 million (63%).

Figure 4: Top NZ 15 exports, by commodity and destination, for the year ended December 2024 - by destination

Source: Statistics New Zealand (2024)<sup>6</sup>

Figure 5: Top NZ 15 exports, by commodity and destination, for the year ended December 2024 - by commodity

Source: Statistics New Zealand (2024)<sup>7</sup>

This data illustrates New Zealand’s exposure to agricultural commodities, with milk powder, butter and cheese earning NZ\$12,537 million (51%), and meat and edible offal earning NZ\$5,820 million (24%). This is potentially a concern as it leaves New Zealand reliant on agriculture, an industry which is vulnerable to climate change and extreme weather. It also suggests we need to design public policy which protects our international reputation for producing safe edible products, as there is a risk of disease or genetically modified organisms (via consumer resistance or GMO escape) negatively impacting supply or demand.

This data also demonstrates New Zealand is highly reliant on China, exporting a total of NZ\$12,899 million (53%) there.

The value of New Zealand’s milk powder, butter and cheese exported to China is NZ\$2172 million<sup>1</sup> more than the value of New Zealand’s top 15 commodities exported to the United States, our second biggest trading partner.

Whether USA tariffs relate to commodities only, or extend to services, will influence the first-level impacts on the New Zealand economy. However, history tells us that second- and third-level effects are likely to have a significant impact (e.g. those from the Ukraine war and the US subprime mortgage crisis), and there will be more shocks to come.

### 3.2 Imports

#### NZ imports by country (June 1896–2024)

This animation shows how New Zealand’s imports by country have changed over time. You can observe trends in New Zealand’s imports by watching how certain colours change each year.

Watch the light green (Republic of Korea) and you will see how it becomes increasingly significant. The Korea-New Zealand Free Trade Agreement (KNZFTA) came into force in December 2015, and provided a foundation for closer trade relations between the two countries.<sup>8</sup> This is also reflected in increased imports of refined fuels from Korea. Over the past five years, the OEC reports New Zealand’s imports from the Republic of Korea have increased at an annualised rate of 13.5%, from \$1.97B in 2018 to \$3.71B in 2023.<sup>9</sup>

Watch the red (India) and yellow (People’s Republic of China) and you will see the probable impact of a free trade agreement with other countries. New Zealand and China signed and entered into a free trade agreement in 2008, and China is now New Zealand’s largest trading partner.<sup>10</sup> In March 2025, the National Government announced New Zealand and India have formally launched negotiations on a Comprehensive Free Trade Agreement.<sup>11</sup>

You can also view the Institute’s animation on NZ imports by commodities for more detail on what New Zealand imports and how that has changed from over time.

Figure 6: NZ imports by country (June 1896 and 2024)

1 The calculation is \$6346m less [\$883 + \$2595 + 696].

[NZ imports by commodities \(June 1898–2024\)](#)

This animation shows how New Zealand’s imports by commodities have changed over time. You can observe trends in New Zealand’s imports by watching how certain colours change each year.

Watch the orange (Machinery and transport equipment) and you will see that it grows to become the dominant import for New Zealand. Arguably, this may indicate a potential supply chain risk further down the line.

Watch the medium blue (Mineral fuels (lubricants and related materials)) and you will see that over time it becomes increasingly significant. This may be due to increased imports of refined fuels from Korea over the past few years.<sup>12</sup>

You can also view the Institute’s animation on NZ imports by country for more detail on where New Zealand’s imports come from and how that has changed over time.

Figure 7: NZ imports by commodities (June 1898 and 2024)

### 3.3 Crown receipts and expenditure

#### NZ Crown receipts (June 1899–2024)

This animation shows how New Zealand’s Crown revenues have changed over time. You can observe trends in New Zealand’s Crown receipts by watching certain colours and how they change each year.

Watch the two darker blues (Direct Taxation and Indirect Taxation) and you will see the gradual change in tax systems over time. New Zealand was using tariffs, but most of these were stopped by 1999.<sup>13</sup> You can see this in the growth of the indirect taxation.

Choose the lightest blue (Sales of Goods & Services) and you will see the growth that primarily starts in the early 2000s. The GST rate increased to 12.5% in 1989 and to 15% in 2010.<sup>14</sup>

You can also view the Institute’s animation on NZ Crown expenditure for more detail on New Zealand’s Crown expenditure and how that has changed over time.

Figure 8: NZ Crown receipts (June 1899 and 2024)

NZ Crown expenditure (June 1899–2024)

This animation shows how New Zealand’s Crown expenditure has changed over time. You can observe trends in New Zealand’s Crown expenditure by watching certain colours and how they change each year.

Watch the three pinks (Social security, welfare, pension & GSF; Health; and Education) increase over time. You will see New Zealand’s move to a much more social welfare system.

Watch the orange (Defence) and observe how the amount spent on defence has remained relatively low and has decreased in recent years. In 2025, some New Zealand politicians and others have suggested the percentage New Zealand spends on defence should increase to align with our international partners.<sup>15</sup> Prime Minister Christopher Luxon has said he wants to get ‘close’ to spending 2% of New Zealand’s GDP on defence, a target that members of the Nato alliance are asked to hit.<sup>16</sup>

You can also view the Institute’s animation on NZ Crown receipts for more detail on New Zealand’s Crown revenues and how that has changed over time.

Figure 9: NZ Crown expenditure (June 1899 and 2024)

## Glossary

### **Mineral fuels (lubricants and related materials)**

Mineral fuels, lubricants and related materials are a part of Coal. They include Coal, coke and briquettes and Petroleum, petroleum products and related materials.

### **Crude materials, inedible, except fuels**

Crude materials, inedible, except fuels include Metalliferous ores and metal scrap and Crude fertilizer and crude minerals (excluding coal, petroleum and precious stones).

### **Travel services**

Includes 'the value of goods and services purchased by a person when they are visiting another country. Travel expenditure is the largest component of both services exports and imports.'<sup>17</sup>

# Appendix 1: Exports and imports by country

Table A1: Exports and imports by country from June 1896–2024

| Year  | EXPORTS  |                  |          | IMPORTS                                |                  |          |
